

Attention Electronics Recyclers!

- ***Are you seeking better market opportunities for your materials?***
- ***Do you understand the qualifications and audit requirements required to recycle electronics for OEMs and under provincially-regulated EPR Programs?***
- ***Are you aware of the material specifications used in the industry?***
- ***Are you aware of related legislative initiatives across Canada and internationally?***
- ***Is there an organization that represents your specific business concerns?***

Governments and industry across Canada are focussing on responsible electronics recycling issues. Landfill bans are being enforced and every province has plans to enact electronic product take-back legislation such as now exits now in Alberta and Saskatchewan. More and more businesses are demanding fully accountable e-recycling services to protect them from liabilities related to both environmental and security risks.

The Canadian Association of Recycling Industries (CARI) wants to help *you* grow your business! CARI, in conjunction with Electronics Product Stewardship Canada (EPSC) and the Recycling Council of Ontario (RCO), will host a one day workshop to address issues important and learn of markets to grow your e-recycling business.

The workshop will also include facility tours of MaSeR Canada's and Global Electric Electronic Processing (GEEP's) state-of-the-art material recovery technologies.

SAVE THE DATE!
May 3rd
Holiday Inn – Barrie, ON

We look forward to interactive discussions to help us learn more about your business concerns and how CARI might best represent the interests of the Canadian electronics recycling industry.

Complete agenda and program details to follow!

CARI is the national organization of Canadian recycling industries. It was founded in 1941 and today it is comprised of some 265 companies ranging from individual scrap collectors to technologically advanced, capital intensive processing plants. Members are engaged in the recycling of all commodities, but the majority deal primarily or exclusively in metals.
